PROFESSIONAL SUMMARY

Backend-focused full-stack software engineer with a B.Sc. in computer science and engineering, currently working as a senior executive, backend, at SparckTech Agency. Builds and maintains production REST APIs and server-side systems with Node.js, TypeScript, Express.js, MongoDB, and PostgreSQL. Delivered two live mobile-backed platforms (ENG Sports & League Platform and Yoga with Jen) covering Stripe and Apple In-App Purchase billing, wallet systems with transactional audit logs, Redis/BullMQ background jobs, Socket.io real-time features, and media delivery pipelines. Also builds dashboards and web interfaces with Next.js, React, and Redux Toolkit.

TECHNICAL SKILLS

Backend: Node.js, TypeScript, Express.js, REST APIs, Authentication, Webhooks, Socket.io, BullMQ, BullBoard, Multer

Databases: MongoDB, Mongoose, PostgreSQL, Prisma, Redis

Payments & Integrations: Stripe (subscriptions, webhooks), Apple In-App Purchase verification, Firebase Cloud Messaging (FCM), AWS SES, Cloudinary

Cloud & Infrastructure: AWS (EC2, S3, SES, IVS), VPS deployment, BunnyCDN, FFmpeg

Frontend: Next.js, React.js, TypeScript, ES6, Redux Toolkit, TanStack Table, HTML5, CSS3, Tailwind CSS, shadcn/ui, Ant Design

Tools: Git, GitHub, Postman, ESLint, Prettier, npm, Yarn

PROFESSIONAL EXPERIENCE

Senior Executive, Backend | SparckTech Agency

February 2026 – Present

- Develop and maintain RESTful APIs for backend services, focusing on reliability and scalability.
- Design and manage relational and non-relational data models using PostgreSQL with Prisma and MongoDB with Mongoose.
- Deploy and maintain services on AWS (EC2, S3, SES, IVS) and VPS environments.
- Test and debug application features, identifying and resolving defects to improve system stability.
- Collaborate with cross-functional teams to deliver features on schedule while maintaining code quality.

Technologies: Node.js, Express.js, MongoDB, Mongoose, PostgreSQL, Prisma, AWS (IVS, EC2, S3, SES), VPS

PROJECTS

ENG Sports & League Platform | *Full Stack Developer*

- Architected a modular Node.js/TypeScript backend with 50+ domain modules covering player transfers, referee assessments, and match schedules.
- Engineered an automated standings engine (points table and clean sheets) and a virtual coin/wallet system with transactional audit logs.
- Implemented live match status broadcasts with Socket.io and background job processing with BullMQ and Redis.
- Built video highlight processing using AWS S3 and FFmpeg.
- Developed responsive management dashboards with Next.js 15, Redux Toolkit, and TanStack Table for leagues, tournaments, and real-time player statistics.

Technologies: Next.js 15, TypeScript, Redux Toolkit, TanStack Table, Node.js, Express, MongoDB, Redis, BullMQ, AWS S3, FFmpeg, Socket.io, Stripe

Live (App Store): https://apps.apple.com/us/app/eng-sports-events/id6792217626

GitHub: https://github.com/iamrakiburrahman/eng-backend

Yoga with Jen OTT Video & Movie Streaming Platform | *Backend / Full Stack Developer*

- Developed the streaming backend managing movies, seasons, episodes, trailers, and ad placements.
- Designed a media delivery pipeline on BunnyCDN Storage for low-latency, adaptive video playback.
- Automated multi-tier subscription billing using Stripe webhooks and Apple In-App Purchase (IAP) verification.
- Implemented distributed background jobs with BullMQ, using a Bull-Board dashboard for queue monitoring and daily analytics.
- Built user engagement features (watch history, bookmarks, reviews) and Firebase (FCM) push notifications.

Technologies: Node.js, Express, TypeScript, MongoDB, Redis, BullMQ, Bull-Board, BunnyCDN, Socket.io, Stripe, Firebase (FCM)

distributed-notifier | *Author and Publisher, npm Package*

- Built and published an MIT-licensed distributed notification engine for Node.js, delivering messages through push (FCM/APNs), email, SMS, in-app WebSocket, and webhook channels.
- Designed two execution modes: a zero-dependency in-memory priority queue and a distributed Redis/BullMQ mode with shared state, using atomic Redis SET NX EX operations to prevent duplicate notifications across clusters.
- Implemented resilience features, including a circuit breaker, per-provider leaky-bucket rate limiting, and a durable dead-letter queue, with event hooks (delivered, failed, dispatched, dead_letter) for observability.
- Wrote the package in strict TypeScript with a 38-test suite passing at the v1.1.0 release.

Technologies: TypeScript, Node.js, Redis, BullMQ, WebSockets, Firebase Cloud Messaging, Twilio, SendGrid, Resend
npm: https://www.npmjs.com/package/distributed-notifier
GitHub: https://github.com/iamrakiburrahman/distributed-notifier

fast-sorted-set | *Author and Publisher, npm Package*

- Built and published an MIT-licensed, zero-dependency in-memory sorted set and real-time leaderboard library for Node.js and TypeScript, modelled on the Redis sorted set (ZSET).
- Implemented a skip list with span pointers alongside a hash-map index, giving O(log N) insert, rank, and range operations and O(1) score lookups.
- Benchmarked at about 68,700 inserts per second on 50,000 items and about 285,000 top-10 queries per second on Node.js, as reported in the README.
- Added a higher-level Leaderboard API (rank, top-K, players around a user), unit tests and a benchmark suite, and a dual ESM and CommonJS build.

Technologies: TypeScript, Node.js, Skip List, Data Structures, and Algorithms
npm: https://www.npmjs.com/package/fast-sorted-set
GitHub: https://github.com/iamrakiburrahman/fast-sorted-set

EDUCATION

B.Sc. in Computer Science and Engineering | Bangladesh University of Business and Technology
2020 – 2024 | CGPA: 3.25 / 4.00
Diploma in Engineering | Chadpur Polytechnic Institute
2016 – 2020 | CGPA: 2.95 / 4.00

COURSES

- Next Level Web Development, Programming Hero
- CS Fundamentals with Phitron, Programming Hero

LANGUAGES

Bengali (native); English (basic conversational)
